ENERGY MANAGEMENT SOLUTION

SPANGLER – the Plus of Innovation.

WHAT IS ENERGY MANAGEMENT?

Energy management means the possibility of representing energy consumption. A foresighted, organised and systematically coordinated process makes the distribution and use of energy controllable.

The objective is a continual analysis of energy consumption, so that saving potentials can easily be established. Measures to enhance efficiency can be understood through visualisation.

The advantages of a systematic, strategic and permanently anchored energy management are:

- ⦿ To create transparency
- ⦿ To uncover saving potentials
- ⦿ To reduce costs
- ⦿ To improve image
- ⦿ To go easy on resources

ENERGY MANAGEMENT SYSTEM

SPANGLER – the Plus of Efficiency.

WHY ENERGY MANAGEMENT?

The SPANGLER energy management system helps to organise measures and processes for the strategic improvement of energy efficiency in your company. It provides a sound base for decisions and investments for optimisation of the use of energy.

The SPANGLER energy management system pays off for

companies of all sizes. There is a great potential for cost savings particularly in companies with high energy intensity. In addition, tax relief can be gained on energy and electricity tax within the context of the surplus settlement.

Low energy consumption also makes an important contribution to climate protection.

SPANGLER AS A PARTNER

SPANGLER – the Plus of Cooperation.

YOUR PARTNER FOR OPTIMISATION AND EFFICIENCY

Working closely with you, SPANGLER prepares a custom-made solution which is optimally matched to your requirements and reliably guarantees the required effective energy.

SPANGLER analyses requirements and illustrates possibilities within the company. During selection and recommendation of an efficient solution for your

requirements, we take both economic aspects and climate-related impact aspects into consideration. All the relevant legal provisions are incorporated in the considerations. Systems which are operated with renewables are also considered.

SPANGLER is also your partner for optimum operation following planning and commissioning.

ENERGY MANAGEMENT SOFTWARE

SPANGLER – the Plus of Control.

SOFTWARE FOR MANAGEMENT

A software system solution certified to ISO 50001 serves as a virtual interface for the user-friendly presentation and analysis of the recorded data.

SPANGLER integrates the program into your existing software architecture. Equally, data and measured values from your system can be integrated in the SPANGLER energy management software.

SPANGLER energy management software means:

- Energy data recording
- Energy data monitoring
- Energy data reports
- Energy data organisation
