

Press release

Spangler honours long-time employees

November 21, 2023, Töging. In a special ceremony, Spangler Automation honored 16 deserving and long-time colleagues for their years of employment. Together, the 16 honorees represent a total of 245 years of service to the company, amounting to several lifetimes of a working life. The management personally thanked the employees for their loyalty and service during the ceremony. The honorees were joined by their respective department heads to reflect on the years spent together.

Recognition for Loyalty and Commitment

Managing Directors Tina Lambert and Christian Brandmüller took a lot of time to honor each employee personally. In their individual speeches, they also addressed the roles of the employees in the company's success story. The honorees have been with the company for 10 to 30 years, leaving their professional marks in various roles and departments. "Each of today's honorees represents commitment, expertise, and team spirit, representing the values of our company," says Managing Director Tina Lambert, emphasizing the significance of the awards.

Bright future prospects

The company's promising future prospects can be attributed to the second group of honorees. Through an internal improvement system, employees can participate in the company's processes. This year, five employees were also recognized for providing valuable suggestions. One proposal, in particular, aimed at standardizing databases for visualization, struck a chord in simplification efforts. Lisa Bögerl took first place with five submissions, followed by Gregor Veit in second place, and three colleagues shared the third place.

Cozy Gathering

The event concluded with a cozy get-together. After 245 years of collective cooperation, there were plenty of anecdotes shared over snacks.

About SPANGLER

SPANGLER Automation employs around 150 people at its headquarters in Töging in the Altmühl valley and has been a reliable partner of the national and international mechanical and plant engineering for more than 40 years.

More than half of the plants produced are exported worldwide. The medium-sized family-run company plans and engineers plant automation, programs the control technology and manufactures switch and control systems for various sectors such as environmental technology, agricultural economy, building industry, food industry, automobile industry, raw materials industry as well as renewable energies.

Moreover, SPANGLER carries out the start-up and the after-sales service of the plants.
